## Year Five and Six Headwear

### Where Protective Headwear can be worn

- Operating theatre
- Pharmacy
- CDU (central decontamination unit)
- During food preparation.

### Visors

- Most visors are made of polycarbonate, which is light.
- The visor is a curved piece of plastic that will cover the eye area.
- Visors are transparent which means they can be seen through by the wearer.

### Design Brief

Protective headwear is incredibly important within hospitals when dealing with viruses and infections. Whilst protective headwear is important, it can be incredibly expensive to resource and supply. In addition, doctors have admitted that protective headwear can be uncomfortable. Your challenge is to create a detailed design of a potential piece of headwear and then create it.
